

HYPERLITE WAKE CO.

2021

HYPERLITE / BOARD SHAPERS

INNOVATION

THE SPORT WE LOVE - GROWTH - PASS THE HANDLE

HYPERLITE HAS YOUR STYLE COVERED

Hyperlite is unique and diverse when it comes to shaping wakeboards and is the only brand to have 3 proven gurus in the R&D center. Our competition employs 1 shaper, and you can see it when you look over their line-up. Hyperlite offers vastly different shapes, ensuring we have a Wakeboard to suit your style. Butch is known most for his 3-Stage Rocker innovations and his boards provide a great pop off the wake. Aaron leans towards an Abrupt Continuous style with channels from tip to tail and his Rusty shapes have received multiple awards. Nelson's design philosophy really caters to those who like a true carve and predictable pop. At the end of the day your style belongs to you, and Hyperlite prides itself on offering various designs suitable for everyone's Wakeboarding style.

HL / SHAPERS STORY

Hyperlite knows everyone has their own unique ride style, so we believe it's important to have boards designed by equally unique shapers and Hyperlite is the only manufacturer to employ three. This diversity ensures that there is a board in the line that's perfect for you out on the water.

GREG NELSON DESIGN

The first pro wakeboarder to take the reins in the R&D lab was Nelson. With more than 20 years of design success he's polished his philosophy and likes to produce easy riding boards that anyone can be comfortable on right away. Working with Murray, LaRiche and Maur, he's helped them create the pro model wakeboards they cherish. Our Wakeboarding Legend has as much passion for creating boards as he does for riding them.

SHAPED BY SCOTT "BUTCH" BOUCHARD

Scott Bouchard entered the shaping scene as an innovator with a background rooted in surf. His unique take on the 3-Stage Rocker helped riders like Byerly and JD get more pop off the wake when wakes were small. His passion for sourcing new materials and creating new construction methods has produced some of Hyperlite's bestselling models.

SHAPED BY AARON

Aaron has a solid pedigree in board design and he's responsible for everything that goes into a Hyperlite board today. No wonder he and Rusty devised the Marek which earned multiple "Board of the Year" awards. Always enhancing a wakeboard's performance, whether at the top end with our Kruz Nova or entry level with our bestselling State 2.0, he's Hyperlite's mastermind, killing it for boat and cable riders alike.

HYPERLITE / BOAT

FREERIDE

COLLECTION

Hyperlite has a diverse line of shapes, but they all benefit from our continued passion to innovate both our materials and construction. Working with the world's most renowned pro wakeboarders, these cutting edge manufacturing techniques are geared at on-water performance allowing everyone to get the most out of their board. Nova Core is the industry's lightest construction. PopTop blends the feel of wood into a freeride boat board. CarboNetX improves the board's torsional response. Hyperlite's SizeUp philosophy is delivering larger boards more suited to today's larger wakes, while providing soft landings. Enjoy the most technically advanced freeride collection ever assembled.

RIOT NOVA

BOARD:
RIOT BIO

CarboNetX
REINFORCEMENT

BIO 3 CORE W/ CARBONETX™

RESPONSIVE FEEL & DURABILITY

Our exclusive technology provides great pop without sacrificing the natural flex pattern of the board. This woven diamond carbon inlay creates a uniform feel from tip to tail while providing a little extra kick.

CONSTRUCTION FEATURES

FEATURED ON:
VAGABOND, RIOT BIO

BOARD:
PRIZM

BIO 3 CORE W/ POPTOP™

NATURAL WOOD OLLIE POWER

Want ollie power? Like the feel wood cores provide, but still want the performance of a Bio 3 lay-up? Look no further, we are putting the lively feel of real wood right under your bindings.

CONSTRUCTION FEATURES

FEATURED ON:

RELAPSE

BOARD FEATURES

NOVA CONSTRUCTION™ : The industry's lightest, most advanced core option offered to date. Nova core is our exclusive machined material that has vastly different properties than other core materials. It is lighter, livelier, and stores and releases energy as you ride.

NOVA CARBON POPTOP™ : Lively and lightweight is what Noah asked for, Hyperlite developed this top laminate to give his RIOT more snap off the wake while remaining the lightest construction in the industry.

CarboNetX™ : CarboNetX is Hyperlite's most innovative construction feature, adding to the most technically packed boards in the industry. Diagonal woven carbon fibers allow the board to store and release energy consistently throughout the ride. Our criss-crossed fibers act like springs and tension cables, delivering a responsive feel and added durability accounting for less than 1% of the board's overall weight.

POPTOP™ : For those that love the snap and ollie power a natural wood deck provides, but can't sacrifice the reduced weight and contours of a Bio3 core, our PopTop tech is for you! This additional birch laminate sits between the rider and the first layer of fiberglass, allowing for the feel of a natural wood core directly under foot.

BIO 3 CORE™ : The secret recipe we have been perfecting since day one. This core material is the gold standard in the industry and used throughout our line. Bio 3 is our lightest and most durable formula to date.

CARBON TORSION ZONE : Aerospace grade carbon graphite inlays build unmatched strength and energy into every board they are put into.

MONOCOQUE CONSTRUCTION : Integrating the top glass and the bottom glass into one. Generating a more durable board on side impacts to prevent delamination.

LAYERED GLASS : Our fiberglass is available in 3 weights depending on the board. Over time, traditional woven glass fibers will separate. With layered glass every Hyperlite deck will have the same pop off the double up year after year.

SATIN FLEX : Tailored specifically to a female rider's needs. A softer glass layup to create a softer flex and a board built to female riders standards.

HYPERLITE / PARK

CABLE

COLLECTION

Wake park riders demand flex and durability from their cable wakeboard. Hyperlite's cable collective delivers, plus so much more. Innovations like our Airstick Core and Feather Flex lighten both wood and foam cores without sacrificing reliability, making the #Hashtag and Wishbone stand apart. Simply shaped, our board bellies offer softer landings from kicker hits or huge air tricks. The new urethane sidewall found on the JAM flexes with the board while protecting it from dings. Rest assured our team riders have tested each innovation in the Cable Collective establishing the most progressive boards lapping the park.

BOARD:
WISHBONE

AIRSTICK™
WOOD CORES

**TORSION
TECH**

AIRSTICK CORE W/ TORSION TECH

STRONGER & MORE DURABLE

Torsion Tech allows a rider maximum control and feel on features. The tip and tail are designed to twist with a rider's weight when pressing. This creates a shape that will ensure limited board rock and maximum surface contact when pressing.

CONSTRUCTION FEATURES

#HASHTAG

BOARD:
UNION

WOOD LITE FLEX CONSTRUCTION

KEEPS YOU FLEXIN' ALL DAY

The perfect core for park boards with a lively feel and deep-rooted durability. 100% lightweight Paulownia is the meat in this gourmet sandwich.

CONSTRUCTION FEATURES

FEATURED ON:

UNION

CORES

AIRSTICK CORE : Our exclusive AirStick Core begins with all- natural, grass fed Paulownia wood cores that have been raised without antibiotics or steroids. We take these happy little cores and machine them to the perfect tolerance, removing channels of unneeded material from tip to tail to create the lightest wood core option in the industry.

TRI-AX GLASS : This glass features a configuration of fibers running in three directions for maximum durability while still allowing the board to flex.

WOOD LITE FLEX CONSTRUCTION : The perfect core for park boards with a lively feel and deep-rooted durability. 100% lightweight Paulownia is the meat in this gourmet sandwich.

E-CORE : This 100% wood core brings life to your deck and adds a new dimension of feel and control on rails.

URETHANE SIDEWALL : Molded urethane flexes seamlessly with a wakeboard and bonds to top and base laminates for a fully bonded construction.

SINTERED ENDURO BASE : Our Sintered Enduro Base material is the strongest most durable running surface we offer. The Sintered Enduro formula undergoes a process that creates a strong bond between particles making the finished product nearly indestructible. This base option is the perfect choice for the cable park season pass holder.

FLEX SPECTRUM

Each of our Cable Collective boards are designed with a different style of rider in mind. Some of these decks feature a soft pliable feel for maximum control on features while others are slightly stiffer for additional ollie power and response. Look for this icon to tell you how your new board will flex!

SOFT / PRESS:

The perfect park tool! Our softest flex pattern offers simple nose presses and forgiving kicker landings.

STIFF / POWER:

Stronger & stiffer layups provide prompt rebound characteristics, increased ollie power and consistent board speed.

HYPERLITE WAKE CO X SYSTEM FOOTWEAR

LIGHTER. STRONGER. BETTER.

PROGRESSIVE WAKEBOARDING

● **HYPERLINER® HEAT MOLDABLE LINERS:** 

Custom heat moldable liner conforms to your foot creating a perfect fit. Take the time to heat 'em up!

● **LASTED CONSTRUCTION:** 

The last is what the boot is shaped around and determines fit, heel hold, and toe box shape. Our lasting process allows for a consistent comfortable fit everytime you put your foot into it.

● **POWER POP INSOLES**

Our custom insoles decrease shock and provide excellent energy return for maximum performance. Multi-density construction provides extra support and comfort in critical areas. Made with zero stench anti-microbial fabric.

● **BASELESS CHASSIS:**

Our new System Binding utilizes a true baseless design to give a rider the closest possible boot to board connection. Removing the barrier of a baseplate, as found on most traditional wake boots, allows a rider to transfer heel and toe energy directly to the board for the fastest edge response possible. For riders that are looking for additional impact protection and slightly mellower feedback, the System Pro comes complete with a removable EVA footpad. This feature allows for the option of which set-up is best for the conditions or location they are riding.

THE GOOEY BOOT

SYSTEM LOWBACK BINDING

HYPERLITE SYSTEM FOOTWEAR

PROGRESSIVE WAKEBOARDING

ASYMMETRICAL URETHANE HIGHBACKS:

Our exclusive Urethane material is pliable when flexed laterally, but is stiffer and more supportive when direct pressure is applied. This means you will be able to poke out those grabs while also having maximum board control support when initiating a heel side edge.

EVA-LITE OUTSOLE:

Hyperlite outsoles blend performance, comfort, and durability in the lightest possible EVA material. The Internal TPR heel shock pad provides extra cush on hard landings.

LOWBACK ENGINEERING:

The LowBack allows for maximum range of motion, making it the perfect choice for riders looking for extra mobility and flex. This new one-piece construction is extremely durable while allowing for natural board flex. This is accomplished by the integrated flex zones in the rear of the binding ankle support.

FREE FLEX TOE CAP:

The all new Free Flex toe cap offers a rider the flexibility of positioning the toe cap/strap over the top or toe of their boot. This customized functionality is made possible by the TPR webbing we have incorporated into this new design. This flexible webbing is engineered to conform to our boots in either position and then rebound to its original shape.

Eight seasons ago, we at Hyperlite forever changed the way riders look at their boot to board connection. The System introduced a new way to build the industry's best support, comfort and board control into wakeboard binding technology. Years later we have gone beyond, improving an already revolutionary design. The System Binding line, including the LowBack model, utilizes a chassis design with baseless options for the best board connection. These lightweight designs provide maximum support and board control, while still allowing a great range of motion. The System Pro and the LowBack System Bindings rely on our Flexion Ankle Strap and Free Flex Toe Strap / Cap, both offering adjustability for the ideal fit for every boot size.

The System Bindings are designed to work specifically with our new line of System Footwear. Each boot in the line offers a different degree of flex and feel for every ride style.

PRO SURF ROPES

FORGED EVA END-CAPS AND UPGRADED GRIPS CREATE THE PERFECT HANDLE FOR YOUR SURF SET

Hyperlite Surf offers unique high performance boards for all ability levels and now introduce a complimentary line of Wakesurf ropes to exceed previous experiences getting into the wave. Noah Flegel administered oversized Foam End Caps to his pro model RIOT Surf Rope allowing him to pitch the handle back to the boat keeping it and its passengers safe. The new Pro Surf Handle also utilizes Noah's expertise but with an EVA grip while the RIOT is suede. The design also eliminates board dings in those rare instances where the handle can hit your most prized possession. With a solid 10" floating handle and 4 machined EVA floats over the 25' total length this combo remains afloat for the entire session.

RIOT ROPE

- 25' Riot Surf Rope w/ Handle
- 10" Handle with Team Grip
- Oversized Foam End Caps for Board/Boat Protection

- Hyper-Braid Design For Supreme Grip
- Infinite Riding Lengths
- Great Value
- Available In: Blue, Red or Yellow

H/L ROPE TECH

Hyperlite set a new standard for wake rope technology, ensuring flotation at all times and smooth running through your hands during a pick up. This flotation is accomplished with the Silicone Cable Coating found on both the A-Line and X-Line ropes. Hyperlite Team Riders found that the Silicone Coating provides a smoother feel as the line runs through your hands which was an added bonus as the primary goal was creating a fully floating mainline. The Silicone Cable Coating ensures a buoyant line visible at all times, simply put, Our Lines Float!

X-LINE 70'
